Product Catalog

Utility Profiles

Ideal for machine storage or workshops.

The High Profile

With its high roof this profile is perfect for farm equipment storage. Put in a large overhead door, or decide to add a side entrance. These buildings are ideal for the farmer looking for space. Available in 20' to 60' clear spans with peak heights of 15' to 24'.

The Low Profile

This building is a variation of the High Profile. With a tighter curve, this building provides an attractive roof that doesn't reach as high. Use this building for greenhouses, aircraft hangers, workshops or machine storage. Available in 20' to 50' clear spans with peak heights of 14' to 19'.

Barn Profiles

3', 6', 9' Straight Wall Designs

These buildings are very popular among those who wish to gain that nostalgic look while still creating a useful building for storage, livestock or even residential housing.

With plenty of space in the ceiling, a 2nd floor is very possible with this profile.

Available in these profiles:

Low Barn (3' Straight Wall)

Available in 24' to 40' clear spans with peak heights of 19' to 23'.

Medium Barn (6' Straight Wall)

Available in 24' to 40' clear spans with peak heights of 22' to 26'.

High Barn (9' Straight Wall)

Available in 24' to 40' clear spans with peak heights of 25' to 29'.

Canvas Shelter

A less costly alternative for livestock, hay and general storage.

Since 1994 we have been manufacturing high quality rafters for canvas shelter buildings. Business has been booming since the introduction of this product to our production list.

With materials for these buildings costing much less than the average machine shed, this is our affordable yet durable solution.

Because steel is so expensive we decided we needed to make a less costly alternative to the steel hoop rafter. This is our product that provides the same strength at a fraction of the cost. Make your next canvas covered building a wood structure. Available in 20' to 46' clear spans.

Cottage Profiles

Perfect for the unique and beautiful home or cottage of your dreams.

Contemporary Cottage

This profile is our answer to the standard A-frame building. With its unique "bow" look, this building proves that the arch building is unique. The option of adding a second floor exists within this profile. Create the building of your dreams with the Contemporary Cottage profile. Available in 16' to 32' clear spans.

Lakeside Profile

If you are looking for a beautiful building with a lot of space, consider our Lakeside profile. With its 8' straight wall we create a perfect home rafter with plenty of space for a second floor. Available in 24' to 40' clear spans.

Other Products

Mini Sheds

For garden sheds or other small storage buildings.

Designed as an alternative to the regular gable garden shed, this beautiful building is designed to give your yard a much more unique look.

Easy to erect and very attractive, these building are perfect to store your garden tools and accessories in, while maintaining the beauty of your yard. Available in 8' to 14' spans.

Arch Garden Bridges

For your garden or park.

These beautiful handcrafted bridges are a perfect addition to any garden or park. Using strong pressure laminated rafters, we create a product that is built to last.

Make an impact in your garden with a Duecks Arch Bridge.

Laminated Straight Beams

Perfect for headers or decorative beams for your house.

In addition to the many different arch buildings, we also manufacture custom laminated straight beams (a.k.a. Glulam).

You tell us the dimensions and specs and we will manufacture your custom beam. Most of our beams can be planed. If a smooth surface is desired, a sanding finish will be required by customer.
